

Addendum: Results of gastrojejunal anastomotic technique designed to reduce stricture

Authors of the original article: John P. Szczepaniak, B.S.*, Milton L. Owens, M.D., F.A.C.S

Article publishing year: 2009

PMID: 19095504

Date of Addendum posting: November 14, 2014

Addendum Author: John P. Szczepaniak M.D.

Page 78, Table 1, is misleading due to an oversight in the proofing process.

Under the technique line the n values for both the CSA and LSA techniques (n=31 and n=29) only apply to the operative times. Operative times were obtained from Alvarado hospital only. All of the other demographics have n values corresponding with the total number of patients in the CSA and LSA groups (124 and 100 respectively).
